Subham Agarwal

Senior Java Backend Developer

Building scalable, enterprise-ready backend systems with 5+ years of expertise in Java, Spring Boot, and microservices architecture. Specialized in designing secure, high-performance REST APIs and production-grade distributed systems.

Technical Core Expertise

Java Ecosystem

Proficient in Java 8, 11, and 17 with deep understanding of concurrency, generics, and JVM internals

Spring Boot

Expert in Spring Boot, Spring MVC, Spring Data JPA, and Spring Security for rapid enterprise development

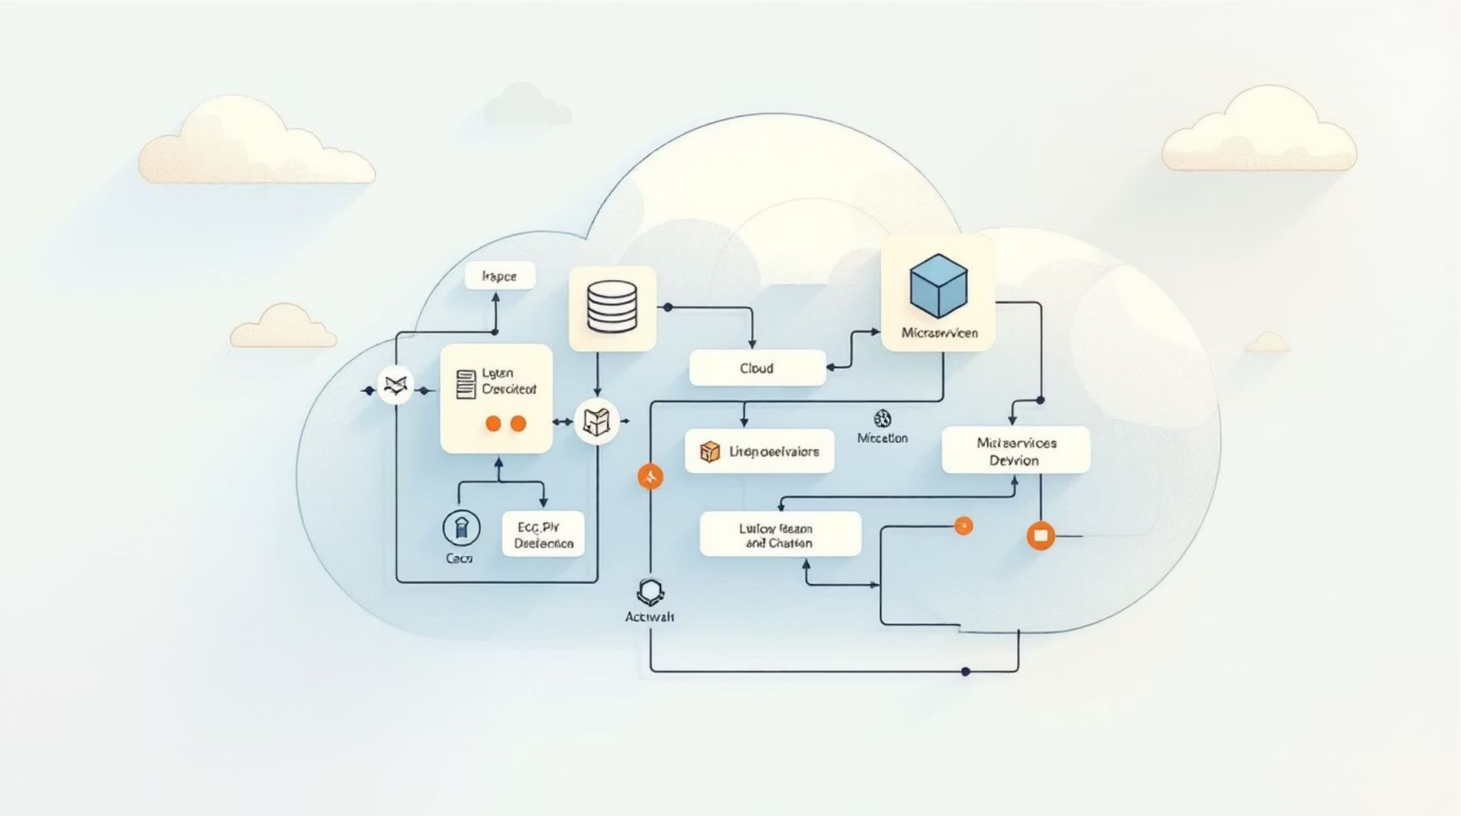
Microservices

Design and implementation of distributed systems with RESTful APIs, service discovery, and circuit breakers

Security

OAuth2, JWT token-based authentication, and authorization frameworks for enterprise-grade security

What I Build



Production-Ready Systems

- Scalable microservices with containerization
- Secure REST APIs with comprehensive documentation
- Automated scheduled jobs for batch processing
- Third-party API integrations (payment, messaging, analytics)
- High-availability backend infrastructure

Architecture & Design Philosophy

Clean Architecture

Layered design patterns with clear separation of concerns and dependency inversion

Design Patterns

Strategic application of Gang of Four patterns, builder, factory, and singleton implementations

Performance

Query optimization, caching strategies, and concurrent processing for millisecond response times

Availability

Fault tolerance, retry mechanisms, and graceful degradation for 99.9% uptime

Career Timeline

1

B.Tech Degree

Rajasthan Technical University – Computer Science & Engineering

2

SAP Commerce Developer

TCS (2020–2021) – E-commerce platform development and customization

3

Application Developer

TCS (2021–2024) – Enterprise application development across multiple domains

4

Package App Developer

Accenture (2024–Present) – Advanced backend systems and integration solutions

Impact Delivered

80%

Test Coverage

Improved code quality through comprehensive unit and integration testing

75%

Manual Work

Reduced manual reporting via automated job scheduling and data processing

40%

API Response

Faster response times through query optimization and caching strategies

Production Stability

Enhanced system reliability through root cause analysis, comprehensive monitoring, and proactive incident prevention strategies

System Scalability

Designed and implemented distributed systems that handle 10K+ concurrent users with consistent performance

Production Excellence

Splunk

Real-time log aggregation, analysis, and alerting for rapid incident detection and resolution

Kibana

Visual analytics and time-series data visualization for operational insights

Debugging

Systematic troubleshooting and debugging techniques for production-grade applications

Incident Response

Proactive monitoring and rapid response to production issues

DevOps & Cloud Stack

CI/CD Pipeline

Automated build, test, and deployment workflows using Jenkins for continuous delivery

Jenkins

CI/CD pipeline orchestration and automation

Docker

Containerization and image management

Kubernetes

Orchestration for containerized applications

AWS

EC2 instances and S3 storage services

Leadership &

Agile Delivery

Scrum ceremonies, sprint planning, and iterative development in fast-paced environments

Mentorship

Guiding junior developers through code reviews, pair programming, and knowledge sharing sessions

Collaboration

Cross-functional teamwork with frontend, QA, and product teams to deliver end-to-end solutions

Code Quality

Enforcing coding standards, best practices, and maintainability through rigorous code reviews

Achievements & Recognition

TCS Digital Promotion

Accelerated career progression to digital division for demonstrated technical excellence and project leadership

TCS KnowMe Award

Recognition for outstanding contributions to team success and organizational knowledge sharing

Let's Connect

Open to challenging opportunities where I can leverage my backend expertise to build scalable, secure systems. Ready to contribute immediately to your engineering team.
